

The earth was already flourishing with life prior to man. Life that has went extinct in several eras, after which all new forms of life arose. It's that gap game back again. Then the last catastrophe struck.

In the oldest manuscripts there is a mark of a pause between the first and second verse. It may be as science tells us, that this globe existed millions of years ago; that it has been the habitation of numerous and varied races of animated beings; and that it has undergone many great destructions and creations before it was brought into its present state: none of these views are in the least discordant with the statement of the inspired historian, that "in beginning God created the heavens and the earth."

In twenty places in this chapter the verb "was" is used as the equivalent to "became". The true meaning of the Hebrew word ["hayah"](#).

The Earth "became" desolate and waste, (tohu wa bohu - used nowhere else together in the Bible except this verse and two other places, and always when used elsewhere point to a once flourishing condition that was then laid waste - Gen 1:2; Isa. 34:11; Jer. 4:23) and darkness overspread the Earth. At this time (man) did not exist prior, nor any of the current animals found with skeletons of modern man, except in a few rare cases as in one or two classes of reptiles and fish that survived this worldwide cataclysm, and the untold number before, told of before science had ever thought of such a thing as possible.

Comet, meteor? Who knows? It is quite accurate when interpreted properly. After unknown periods of time another act of creation occurred, this time with a notable exception, one worth bothering to describe in more detail, unlike any others that may have occurred previously. But then a new creation happened, the waters were separated from the waters (evaporation). "Let there be light...divided the light from the darkness". In Hebrew literally: "divided between the light and between darkness." Where all had previously been darkness due to the destruction, the addition of heat began separating the clouds. The events in the entire chapter are described as if one's viewpoint is from the earth.

It must be noted that the word 'ohr is not the same word used in verse 14 signifying "lights," or "luminaries," ma-'ohr; rather, it signifies "heat." the effect, which immediately followed is described in the name Day, which in Hebrew signifies "warmth."

So heat began penetrating into the depths after God acted, separating the clouds, letting light into the depths, the clouds had been so low as to contact the Earth itself. But heat allowed evaporation and the waters above were separated from the waters below and dry land appeared.

The next is just a twisted version by evolutionists. The creatures in the waters formed first, in Hebrew discourses this includes all microbial and plant life in the seas. Then reptiles and crawling things and finally birds of the air. Then mammals and man. This is where evolution theory got their idea of the order from, the Bible told them long ago. They knew the truth and so modeled their theory upon this same basis. But again, the lack of transitory species makes their interpretation of the events in the Bible suspect. If evolution is indeed correct, where are the transitory species today? Did it only occur in the past? Instead all we see is "Kind after Kind" and different "breeds" or "strains" or "species" within those

Kinds. Lines which are "never" crossed. Lines which never become so different we can't recognize they are all of the same Kind. All Felidae are Felidae. All Canidae are Canidae. All Caprinae are Caprinae.

We know of no other thing, even down to the genetic level, which thanks to technological advancements, is showing that tree is nothing but individual distinct bushes, with sideways variation. I.e., different "breeds, or strains, or species, or subspecies, etc.", within that kind - or bush. Never once indicating a transitional form to another "kind". Even after billions of generations and billions of mutations, all E. coli are still E. coli, and always will be. All Felidae, no matter how many times we breed them or even mutate them in the lab, will always be Felidae.

Every past form of life sprang from nowhere, lived for a time, different breeds of that kind prospering, then went extinct due to cataclysmic actions. In its place all new life once again sprang up, to again repeat the cycle. The Bible just affirms this, when it told you of the earth becoming desolate and waste, and the darkness that became upon it, encompassing it around. Hence the dinosaurs died out. It then described the "sixth" such event, when man himself was created.

There have been 5 - count them, 5 major extinction events. Mankind and the animals with him were created "after" this 5th extinction event, the 6th creative act.

[http://en.wikipedia.org/wiki/Extinction\\_event](http://en.wikipedia.org/wiki/Extinction_event)

Transitory species nothing more than an incorrect classification of the fossil record. As science is beginning to understand from actual study of their bones.

2 of every three classified incorrectly just in the 12 major dinosaurs of North America. And this does not even include the multitude of minor Kinds. the gaps grow larger as real science comes on the scene to do away with the past myths of evolutionists.
